

nG SecureGateway

For a seamless integration of the nG SecureServer

About nG SecureGateway

The nG SecureGateway enables an easy and seamless integration of an nG SecureServer into existing communication infrastructures.

With this extension in use, encrypted mobile calls can be forwarded to extension lines throughout the company.

Featured with IP, ISDN and analog interfaces, a seamless integration in almost any system is possible.

Optimal Integration

With nG SecureGateway in use, secure communication is no longer bound to a few fixed devices (e.g. nG SecurePhone or nG SecurePhone Desktop). It allows the full utilization of all existing internal communication channels.

This means that a secure connection to the company environment can be set up from all over the world. Once "inside" the company, the call can be routed to any extension (see figure below).

Extra features

With nG SecureGateway the corporate nG system can be expanded by individual services, according to the specific customer demands.

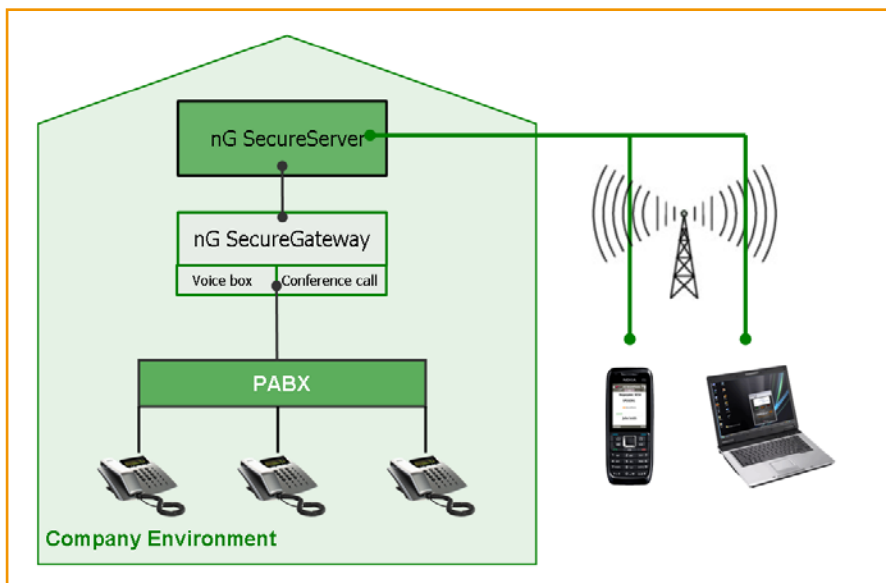

For example a voice box for secure messages can be implanted, or a feature for secure conference calls with mobile clients is available.

Characteristics

- Seamless integration of the nG SecureServer
- Gateway feature
- Call diversion to land line or extensions
- Secure voice message service (optional)
- Participation of mobile clients in a secure conference call (optional)
- Adaptable and expandable to customer demands
