

# nG SecurePhone

## All-in protection for mobile communication

### Risks

Criminal interests in GSM are increasing rapidly since more and more sensitive or even critical calls are made via mobile phones. Today, cell phone conversations are deemed to be an easy target, also information transmitted via text messages is open to unauthorized access.

### Secure Calls

The nG SecurePhone allows a comprehensive and reliable protection of all mobile communication.

In addition to the features of a common Smartphone, it enables tap-proof and entirely anonymous mobile calls. These calls are protected against all kind of tapping scenario by the best and most secure techniques (AES 256 Bit & Diffie-Hellman).

### Secure Messaging

With nG SecurePhone, even text messages can be secured.

Strong encryption ensures not only the protection of messages in transit across mobile networks but also the confidentiality of the SMS stored on the device.

### Lock, trace and wipe

Even if the nG SecurePhone is stolen or lost the data stored on the device is secured.

With a pre-set code the owner can lock, trace or wipe a stolen phone via SMS, even if a new SIM card is inserted.

### Firewall and virus protection

An integrated firewall combined with virus protection prevents spyware attacks and enables secure mobile computing. To prevent infection, all files are automatically intercepted and scanned. There is no need for user intervention.

### Cross-network Security

The nG SecurePhone is of course fully compatible with all nG Security systems and solutions.

### Characteristics

- Tap-proof, anonymous communication
- Reliable protection for private and sensitive messages
- Lock, trace and wipe feature
- Firewall and virus protection with F-Secure Mobile Security
