

Take security into **your** hands.

## nG SecurePhone USB

**Portable desktop telephony, securely encrypted**

### Risks

The change from conventional communication systems to IP telephony is increasing continuously and can be quite beneficial to companies. On the other hand Voice over IP (VoIP) offers a large attack surface for hackers who tap calls and intercept confidential information.

### About nG SecurePhone USB

The nG SecurePhone USB is used to conduct encrypted phone calls from any PC worldwide without taking security risks.

The nG client runs therefore from a biometrically protected USB Memory Stick that contains sound processing capabilities. All stored data is reliably protected by the integrated fingerprint scanner and no traces are left on the host PC.

Due to the pre-configured user account nG SecurePhone USB is ready for immediate use.

### Cross-network Security

The nG SecurePhone USB is of course fully compatible with all other nG Security solutions and systems (e.g. nG SecurePhone and nG SecurePhone Desktop). It enables secure calls even between different networks, e.g. between desktop and mobile.

### Additional Features

The nG SecurePhone USB is easily administrated and offers a variety of user friendly features to protect sensible data.

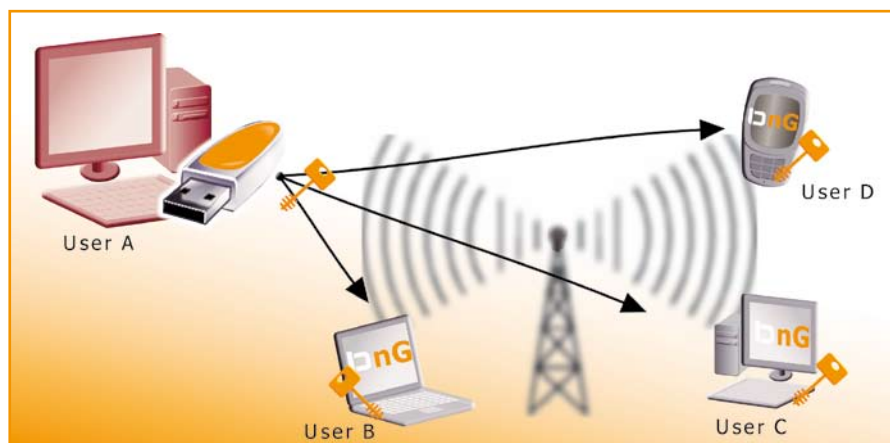

The highly secure encryption protects files, partitions and login data against unauthorized access.

The management of sensible passwords and user names is simplified since all login data can be replaced by the personal fingerprint.

All Software installed on the memory stick (portable software) can be used on any PC, without leaving traces on the host pc.

### Characteristics

- High security standards (AES 256 Bit)
- Pre-installed nG client, pre-configured user account
- Ready for immediate use
- Biometrically protected USB 2.0 Flash Drive (1024 or 2048 MB)
- Encryption of files and partitions
- Protection of login data
- Built-in fingerprint scanner
- Built-in Sound processing mechanism
- Included earphone/microphone set
