

nG SecureServer

Corporate Server Basic - for up to 100 users

Risks

While more and more often even sensitive or critical communication is held over the mobile network, the criminal interest in GSM transmissions has been increasing in equal measure: Mobile phones are, in surveillance terms, a major liability.

About nG SecureServer Basic

The nG SecureServer Basic offers a reliable and easy-to-handle solution to protect the mobile communication of up to 100 users against all kind of different tapping scenarios.

The Corporate Server assures best usability: the web-based Security Manager enables user-

friendly administration, the redundant and high secured system architecture provides highest availability.

The nG Security solutions encrypt mobile calls and VoIP calls on the highest level (AES 256 Bit) and can be operated on a broad variety of current cell phones, as well as on Windows desktop PCs. In addition to the high security standards the nG Security solutions stand out for excellent quality of service and worldwide availability.
